

Problem-Solution Fit

Date	01 October 2026
Team ID	SWTID-2026-4522
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] - School students and teachers who raise IT requests - School IT helpdesk staff and administrator	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] - Small IT team and low budget - Users do not know IT categories - Basic school devices / shared computers	5. AVAILABLE SOLUTIONS PROS & CONS [AS] - Manual review - accurate but slow and inconsistent - Phone / walk-in requests - no tracking - ML classification - powerful but needs data, licence and effort
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] - Wi-Fi, projector, password and slow-computer tickets arrive daily - Each ticket classified by hand	9. PROBLEM ROOT / CAUSE [RC] - No automatic rule to categorise tickets - Free-text descriptions need a human to read them	7. BEHAVIOR + ITS INTENSITY [BE] - Users type short descriptions and follow up repeatedly - Agents re-read and re-categorise tickets (high at peak times)
3. TRIGGERS TO ACT [TR] - Growing ticket volume and delayed responses - Wi-Fi or projector failures during classes / exams 4. EMOTIONS BEFORE / AFTER [EM] - Before: frustrated, unsure, overloaded - After: relieved, confident, in control	10. YOUR SOLUTION [SL] - Flow Designer flow that reads the Short Description and sets Category and Subcategory on creation - Dependent choice fields and an automatic email to the caller	8. CHANNELS OF BEHAVIOR [CH] ONLINE - ServiceNow ticket form, email notification OFFLINE - Walking to the IT desk, phone calls
