

Customer Journey Map

Date	01 October 2026
Team ID	SWTID-2026-4522
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 Raise the Ticket	Stage 2 Auto Classification	Stage 3 Notification & Resolution
Actions <i>What does the customer do?</i>	- Opens the Incident Workflow form - Enters Caller name - Types the Short Description - Saves the form	- Reloads the form - Sees Category and Subcategory filled in automatically	- Reads the confirmation email - Waits for the IT team to pick up the ticket
Touchpoint <i>What part of the service do they interact with?</i>	- ServiceNow ticket form - Auto Number generated	- Flow Designer automation (in the background) - Ticket record in the Incident Workflow table	- Email inbox - IT agent list view
Customer Thought <i>What is the customer thinking?</i>	"I only need to describe my problem." "Do I have to choose a category?"	"It was categorised without me doing anything."	"Good, my request has been received." "When will it be fixed?"
Customer Feeling <i>What is the customer feeling?</i>	Neutral / slightly anxious about the issue	Impressed and relieved	Confident and reassured
Process Ownership <i>Who is in the lead on this?</i>	Student / Teacher	System (Flow Designer) - configured by the Admin	System sends mail; IT Agent resolves the ticket
Opportunities <i>How can we improve this stage?</i>	- Keep the form to Caller + Short Description only - Add a self-service portal	- Add more keywords - Add Predictive Intelligence later	- Auto-assign to the right group - Add SLA and status-update emails
