

Solution Requirements

Date	01 October 2026
Team ID	SWTID-2026-4522
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should do).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should be).

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Students, teachers and IT staff log in to the ServiceNow instance with their user credentials; only authenticated users can create or view tickets.	High
2	Authorization levels	Caller: create and view own tickets. IT Agent: view, work on and update tickets. Admin: configure the custom table, choices, flow and update set.	High
3	External interfaces	Email notification to the caller's email address (Send Email action); reference fields to the sys_user and sys_user_group tables.	Medium
4	Transactions processing	On creation of a ticket (Category empty) the flow starts, sets Category and Subcategory from the Short Description, and sends the confirmation email. An Auto Number is generated for each ticket.	High
5	Reporting	List views of tickets by Category, Subcategory and State; email delivery verified from System Logs > Emails (Preview mail).	Medium
6	Business rules, etc.	Wi-Fi / WiFi / Network -> Network / Wi-Fi; Projector -> Hardware / Projector; Password / Login / Forgot password -> Access / Forgot Password; Slow / Hanging / Slow computer -> Performance / Slow Computer. Subcategory choices depend on the selected Category.	High
7	Compliance to laws or regulations	Only the data needed for support (caller name and email) is stored; access is role-based; follows the institution's IT usage and data privacy policy.	Medium
8	Other	The complete solution is captured in a Project Update Set (Global) that can be exported as XML and moved to another instance.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Classification happens automatically at ticket creation, without any manual step.	Category and Subcategory filled within 5 seconds of saving the ticket
2	Scalability	New categories, subcategories and keywords can be added by editing the flow and choice lists, with no code.	Handles 100+ tickets per day with no extra manual effort
3	Security & Data Privacy	Role-based access to the table, form and flow; only admins can edit the flow; no sensitive data in ticket text.	Only Admin role can edit flow and table; callers see own tickets
4	Reliability & Availability	Runs on the ServiceNow platform; flow is activated and its executions can be monitored.	Flow executes successfully for 100% of test tickets
5	Usability & Accessibility	Caller enters only Caller and Short Description; the Category and Subcategory fields need no manual selection.	Ticket submitted in under 1 minute; standard ServiceNow accessible UI
6	Other	Maintainability and portability: no-code Flow Designer solution packaged in an Update Set.	Update set exports and imports without errors
