

Technology Stack

Date	01 October 2026
Team ID	SWTID-2026-4522
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Platform UI (Form Designer, Form layout)	Ready-made responsive form for ticket entry; no front-end code needed.
2	Backend / Server-Side	ServiceNow Flow Designer (Record Created trigger, If / Else If logic, Update Record, Send Email)	No-code automation that is fast to build, easy to read and easy to maintain.
3	Database / Data Storage	ServiceNow platform database - custom table Incident Workflow with Auto Number; reference tables sys_user and sys_user_group	Structured, standardised storage with dependent choice fields and reference lookups.
4	Cloud / Hosting / Deployment	ServiceNow cloud instance (Personal Developer Instance)	Free, instantly available and cloud hosted - no server setup.
5	Version Control & CI/CD	Update Sets (Project Update Set, exported as XML) and GitHub for project files	Moves the whole configuration between instances and keeps the project versioned.
6	Third-Party APIs / Other Tools	ServiceNow email (Send Email action) and System Logs > Emails (Preview mail)	Sends the automatic confirmation to the caller and lets us verify delivery.
