

Project Initialization and Planning Phase

Date	01 October 2026
Team ID	SWTID-2026-4522
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statements:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A school IT helpdesk agent	Review and route the daily IT support requests quickly	Every ticket has to be read and categorised manually	Requests are free-text (Wi-Fi, projector, password, slow computer) and arrive in large numbers	Overloaded and inefficient
PS-2	A student or teacher	Raise an IT support request and know it has been received	I am not sure which category or subcategory to choose and I get no acknowledgement	I do not know IT terminology and the form asks for too many details	Confused and unsure my issue is being handled
PS-3	A school IT administrator	Keep ticket data consistent, structured and easy to maintain	Manual categorisation gives inconsistent and incorrect values	Different agents classify the same type of issue differently	Concerned about data quality; I want a simple no-code solution
