

Empathy Map

Date	01 October 2026
Team ID	SWTID-2026-4522
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "My Wi-Fi is not working in the library." • "The projector is not turning on in class." • "I forgot my password, I cannot log in." • "Did anyone get my request?"	THINKS • "Which category should I pick for this issue?" • "Will the IT team respond quickly?" • "I just want my problem fixed, not to fill a long form."
DOES • Types a short description of the problem • Raises a ticket on the helpdesk form • Waits and checks mail / follows up with the IT staff • Re-submits or calls the IT desk if there is no reply	FEELS • Frustrated when the issue blocks class or study • Unsure whether the request was received • Relieved and confident when an instant confirmation email arrives
