

Coding & Solution

Date	01 October 2026
Team ID	SWTID-2026-4522
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[Add your GitHub link here - Update Set XML and project files]
Programming Language(s)	No-code configuration (ServiceNow Flow Designer); no scripting required
Framework(s) Used	ServiceNow platform: Flow Designer, Form Designer, Tables, Update Sets
Key Features Implemented	- Custom table Incident Workflow with Auto Number - Fields with correct types and choice lists - Category-to-Subcategory dependency - Flow: Record Created, Category is Empty - Auto classification: Wi-Fi/Network, Projector, Forgot Password, Slow Computer - Email notification to the caller - Update set export
Pending / Incomplete Features	Auto-assignment to groups, SLA tracking and Predictive Intelligence are planned as future enhancements.
Setup / Run Instructions	1. Open the ServiceNow instance and import the Project Update Set XML (Retrieved Update Sets > Import Update Set from XML). 2. Preview and Commit the update set. 3. Open the Incident Workflow table and create a ticket with a Caller and a Short Description (e.g. WiFi not working in library). 4. Save and reload the form to see Category and Subcategory filled. 5. Check the email under System Logs > Emails.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The solution is built entirely with ServiceNow no-code tools, so there is no custom script to maintain. All configuration is captured in the Project Update Set.
